SUMMARY

Software engineer graduating July 2026 with internship and hands-on full-stack experience, having shipped multiple production web apps end-to-end — from a green-funding platform to client e-commerce and rental sites. Strong in React/Next.js, Spring Boot, and PostgreSQL, and obsessed with crafting polished, professional, design-driven frontends that feel premium to use.

TECHNICAL SKILLS

- Languages:** Java, Python, C, JavaScript, TypeScript, Dart
- Frontend:** React, Next.js, Angular, Vite, Tailwind CSS, Framer Motion
- Backend & Mobile:** Node.js, Express.js, Spring Boot, Flutter, Firebase Cloud Functions
- Databases & Cloud:** PostgreSQL, Supabase, Firebase/Firestore, MySQL, Vercel
- Tools & Practices:** Git, REST APIs, Figma, code review, QA testing

EXPERIENCE

Software Engineer (Volunteer) Apr 2026 – Present
OLGE Foundation — Remote

- Built and deployed **Green Grant Finder**, a full-stack platform helping NGOs, startups, and researchers discover green-energy and climate funding they qualify for — **Next.js, React, Supabase** (PostgreSQL) on **Vercel**, secured with auth and row-level security (RLS)
- Developed a searchable, filterable grant directory (by sector, region, eligibility, and amount) with bookmarking and weekly email digests via the Resend API
- Built an automated weekly **Python** scraper ingesting new grants from sources such as UNEP and ClimateWorks, plus an admin approval workflow for vetting submissions

Freelance Developer June 2025 – Present
Self-Employed — Remote

- AJ Motors:** Built and deployed a full-stack car-rental platform for a dealership client (**React 19, Vite, Tailwind, Firebase**) with an admin analytics dashboard, multi-language support via DeepL API, and WhatsApp booking — **Live**
- Baby Fashion Store:** Built a custom e-commerce site for a client (**React, Vite, Firebase**) managing 50+ products, with full cart/checkout, order management, inventory tracking, and a Stripe-ready payment architecture — **Live**
- Drive-Thru Coffee Menu:** Built and deployed a bilingual (Arabic/Hebrew, full RTL) menu PWA for a coffee & bakery client (**React 19, Vite, Firebase**) with a live lane wait-time indicator, offline caching, a custom photo-forward design system, and an admin panel for menu & price management — **Live**
- Volt App:** Building a cross-platform mobile shop for electric components — **Flutter/Dart**, Riverpod, Google Sign-In, geolocation (*In Progress*)

Software Developer Intern Feb 2025 – June 2025
Ceeras IT Services — Remote

- Built backend services in **Java Spring Boot** with JPA for data persistence and entity management
- Designed and consumed REST APIs connecting backend services to client applications
- Collaborated with a remote team through weekly planning meetings, integration, and testing to deliver features on schedule

PROJECTS

AI Budget App — Full-stack Angular + Express + PostgreSQL app with DeepSeek AI insights, JWT auth, and PDF export — **Live**

WebChat — Real-time React 18 + Firebase messenger with slash commands, reactions, and a responsive mobile UI — **Live**

EDUCATION

B.Sc. in Software Engineering Oct 2022 – July 2026
Kinneret College

- GPA:** 88 / 100 | **Relevant Coursework:** Compilers (100), IoT (100), Big Data (97), Operating Systems (95), Software Architecture (95), Web Application Development (95), Software-Intensive Systems (90)
- Currently completing:** Machine Learning, Deep Learning, NLP, AI-Based Application Development, Information Security & Cyber
